

**FACSIMILE SYSTEM, METHOD AND PROGRAM PRODUCT
WITH JUNK FAX DISPOSAL**

ABSTRACT OF THE DISCLOSURE

A method, system and program product for comparing a junk fax image stored in a database to an incoming facsimile image to determine whether the incoming facsimile image is a junk fax. If the facsimile image is a junk fax, the image is either deleted or the communication terminated. The invention also provides a junk fax determinator by which an incoming facsimile image can be designated as a junk fax. In one embodiment, a recipient (user) can make the determination as to whether the incoming facsimile image is a junk fax and generate a personal junk fax database. In another embodiment, the recipient (user) can scan a hard copy document to form an incoming facsimile image, which can be saved as a junk fax in a personal junk fax database.
